Executive Summary

Final-year B.E. Computer Science Engineering student with a strong coding foundation in Java, JavaScript, and Python, and hands-on experience building full-stack web applications with REST API integration, JWT authentication, and database-driven system design. Delivered a production-grade front-end interface during an industry internship at Hyundai Motor India Limited, earning recognition for strong team performance. Built end-to-end projects spanning full-stack development and AI-powered computer vision, demonstrating strong analytical thinking and problem-solving ability. A disciplined, fast learner with a proactive attitude, eager to contribute to real-world software development in a collaborative, fast-paced environment.

Education

B.E. Computer Science and Engineering

Rajalakshmi Engineering College, Chennai

Graduation Expected May 2027

CGPA: 7.15 / 10

Skills

Programming Languages: Java, Python, SQL, C++, PHP

Frontend: React.js, HTML5, CSS3

Backend: REST API Development, JWT Authentication, FastAPI, Spring Boot

Databases: MongoDB, MySQL

AI & Computer Vision: Tensor Flow, Keras, CNN, Open CV, ONNX

Tools & Platforms: Git, Android Studio, Visual Studio Code, Postman, Figma

Experience

Frontend Web Development Intern

June 2025

HYUNDAI MOTOR INDIA LIMITED — Onsite, Chennai, India

HTML, CSS, JavaScript

- Built production-grade front-end interfaces for a Room Management System and Intern Mail Management Application as part of a team, translating operational requirements into clean, usable web solutions that streamlined internal communication and resource allocation.
- Collaborated with the IT Autoever cross-functional team to analyze, design, and implement automation features and internal web modules, enhancing operational workflow efficiency within the plant.
- Recognized with a team performance award for outstanding contribution; gained hands-on experience in software development, system integration, and project documentation, demonstrating strong learning agility and adaptability.

Projects

Smart Interview Scheduling System | *React.js, Node.js, Express.js, MongoDB, REST APIs* | [Link](#)

Jan 2026 – March 2026

- Designed and developed a full-stack recruitment platform with candidate management, interview scheduling, and feedback submission modules.
- Implemented RESTful APIs, role-based access control, and MongoDB integration for secure and efficient data management.
- Optimized recruitment workflows by automating interview assignments, candidate status tracking, and interviewer feedback collection.

SmellSenseAI - AI-Powered Food Freshness Detection System | *Python, TensorFlow, FastAPI, ONNX, OpenCV, CNN, React.js, DistilBERT, Hugging Face* | [Link](#)

Oct 2025 - Nov 2025

- Developed SmellSenseAI, an end-to-end AI-powered food freshness detection system that classifies food as Fresh or Spoiled using both image-based CNN analysis and text-based DistilBERT NLP classification.
- Optimized and deployed deep-learning models using ONNX Runtime and INT8 quantization, reducing the DistilBERT model size from 268 MB to 67 MB, with a FastAPI backend and React frontend deployed as a complete web application.

Certifications

Java for Absolute Beginners (Udemy, 2024) | [Link](#) Spring Framework 5 and (Udemy, 2026) | [Link](#)

Spring Boot 2

SQL Essentials (LinkedIn, 2025) | [Link](#) Linux: Bash Shell & Scripts (LinkedIn, 2025) | [Link](#)
